

<예제 4.142>

16kN의 무게.

8.5kN의 무게.

(a) 앞바퀴 A에 작용하는 힘

(b) 뒷바퀴 B에 작용하는 힘

$$(a) \quad +\sum \mathcal{M}_B = 0: (8.5\text{kN})(1.3\text{m}) + (16\text{kN})(0.3\text{m}) - 2A(0.9\text{m}) = 0$$

$$A = 8.806\text{kN}$$

$$(b) \quad +\sum F_y = 0: -8.5\text{kN} - 16\text{kN} + 2(8.806\text{kN}) + 2B = 0$$

$$B = 3.444\text{kN}$$

$$\therefore A = 8.8\text{kN} \uparrow, B = 3.4\text{kN} \uparrow$$
